EDUCATION

University of Georgia

B.S. Computer Systems Engineering, Emphasis in Artificial Intelligence

Athens, GA

Aug. 2025 – May 2029

Innovation Academy

Magna Cum Laude Honors Graduate

Alpharetta, GA

Aug. 2021 – May 2025

EXPERIENCE

AI Software Engineering Intern

Jan. 2026 – Present

Handshake

Remote / San Francisco, CA

- Architecting scalable microservices to facilitate the seamless integration of generative Large Language Models (LLMs) into core platform workflows, enhancing user engagement heuristics.
- Optimizing model inference pipelines through sophisticated quantization and pruning techniques, resulting in a significant reduction in computational overhead and latency.
- Collaborating with cross-functional teams to engineer robust prompt-tuning frameworks, elevating the precision of automated talent-matching algorithms.
- Spearheading the implementation of vector database indexing strategies to streamline high-dimensional semantic search capabilities for millions of candidate profiles.

Software Engineering Intern

Aug. 2024 – Jan. 2025

THRIVE — Coworking

Alpharetta, GA

- Engineered a high-fidelity AI-powered employee training platform utilizing a hybrid Python and Java architecture to facilitate adaptive content delivery.
- Deployed a custom Learning Management System (LMS) by leveraging TensorFlow and Scikit-learn to automate predictive performance analytics and personalize knowledge retention modules.
- Developed robust ETL automation pipelines using Pandas and NumPy, orchestrating seamless data processing to ensure high scalability across multi-regional franchise locations.
- Leveraged SQL for sophisticated relational data modeling, optimizing query performance for real-time organizational health reporting.

PROJECTS

Desk Caddy AI | *Python, Node.js, REST APIs, LLMs, Webhooks*

Oct. 2025 – Present

- Architected a modular, API-driven conversational intelligence platform integrating STT and TTS pipelines for real-time automated telephonic interactions.
- Designed multi-stage conversational state machines and intent-routing logic to ensure context preservation and robust fallback handling across noisy environments.
- Optimized system orchestration using asynchronous workflows and JSON schemas, minimizing end-to-end latency for mission-critical booking and logging operations.

WorldCupPath 2026 | *Next.js, TypeScript, FastAPI, Python, NumPy, SQLite*

2026

- Built a full-stack 2026 FIFA World Cup prediction simulator supporting the expanded 48-team format, including editable group-stage scores, standings, third-place qualification, and Round of 32 bracket generation.
- Developed a seeded Monte Carlo simulation engine using rating-based expected goals and Poisson-style score sampling to estimate qualification, stage-reach, finalist, and championship probabilities.
- Engineered a Next.js and TypeScript frontend with Zustand and Recharts backed by a FastAPI REST API, Python simulation package, and SQLite persistence for saving and sharing tournament predictions.

TECHNICAL SKILLS

Languages: Python, Java, SQL, HTML/CSS, JavaScript (Node.js), TypeScript, R

Machine Learning & AI: Neural Networks, NLP, Deep Learning, TensorFlow, Scikit-learn, LLM Fine-tuning, Monte Carlo Simulation

Data Science: Pandas, NumPy, MongoDB, SQLite, Matplotlib, Statistical Modeling, ETL Pipelines

Developer Tools: Git, REST APIs, FastAPI, Next.js, CI/CD Automation, Docker, VS Code, Google Cloud Platform
